INTRODUCTION

The National Weather Service (NWS) is legally mandated to provide a Fire Weather Program and there is a requirement from the customers for the NWS to supply the fire weather services. This annual operating plan describes the policies, procedures and relationship the NWS will have with the federal wildland fire management agencies, as well as with the state of Wisconsin wildland fire management agencies. This operating plan complies with and complements the Interagency Agreement for Meteorological Services. Those involved in the interagency agreement with the Department of Commerce, National Oceanic Atmospheric Administration-NWS are the Department of the Interior's Bureau of Land Management, Bureau of Indian Affairs, Fish and Wildlife Service, and the National Park Service, and the Department of Agriculture, Forest Service.

The Operating Plan is updated annually, and is reviewed by representatives of the NWS and each user agency prior to the onset of the spring fire season. All parties should have a copy of this plan available for reference purposes. Each fire management agency receiving this plan will be responsible for duplicating and distributing this plan to its field offices which require NWS forecasts.

A. SUMMARY OF CHANGES FOR 2006

1. New WDNR and USFS contact list for RFW decisions

II. ORGANIZATIONAL DIRECTORY

A. NWS OFFICES AND POINTS OF CONTACT

1. WFO MILWAUKEE/SULLIVAN Backup Office: WFO Green Bay

National Weather Service
N3533 Hardscrabble Road.
Dousman, WI 53118

Phone Number...262-965-2074

Internet Address: <http://www.crh.noaa.gov/mkx/fire.php>

Meteorologist-in-Charge: Ken Rizzo	kenneth.rizzo@noaa.gov
Fire Weather Focal Point: Mark Gehring	mark.g.gehring@noaa.gov
Assistant Fire Weather FP: Mike Fowle	Michael.fowle@noaa.gov

2. WFO LA CROSSE Backup Office: WFO Des Moines

National Weather Service
N2788 County Road FA
La Crosse, WI 54601

Phone Number...608-784-8275

Internet Address: <http://www.crh.noaa.gov/arx/firewx.php>

Meteorologist-in-Charge: Glenn Lusky	glenn.lusky@noaa.gov
Fire Weather Focal Point: Dave Schmidt	dave.schmidt@noaa.gov
Assistant Fire Weather FP: Rod Swerman	rod.swerman@noaa.gov

3. WFO GREEN BAY Backup Office: WFO Milwaukee/Sullivan

National Weather Service
2485 South Point Road
Green Bay, WI 54313-5522

Phone Number...920-494-2363

Internet Address: <http://www.crh.noaa.gov/grb/firewx.php>

Meteorologist-in-Charge: Gary Austin	gary.austin@noaa.gov
Fire Weather Focal Point: Tim Kieckbusch	tim.kieckbusch@noaa.gov
Assistant Fire Weather FPS: Tom Helman	tom.helman@noaa.gov
Tasos Kallas	tasos.kallas@noaa.gov

4. WFO TWIN CITIES/CHANHASSEN

Backup Office: WFO Duluth

National Weather Service
1733 Lake Drive West
Chanhassen, MN 55317

Phone Number...952-361-6708

Internet Address: <http://www.crh.noaa.gov/mpx/fireWx.php>

Meteorologist-in-Charge: Craig Edwards craig.edwards@noaa.gov
Fire Weather Focal Point: Byron Paulson byron.paulson@noaa.gov
Assistant Fire Weather FP: Todd Krause todd.krause@noaa.gov

5. WFO DULUTH

Backup Office: WFO Twin Cities/Chanhassen

National Weather Service
5027 Miller Trunk Highway
Duluth, MN 55811

Phone Number...218-729-6697

Internet Address: <http://www.crh.noaa.gov/dlh/firewx.php>

Meteorologist-in-Charge: Mike Stewart michael.stewart@noaa.gov
Fire Weather Focal Point: Roman Berdes roman.berdes@noaa.gov

6. WFO DES MOINES

National Weather Service
9607 NW Beaver Drive
Johnston, IA 50131

Internet Address: <http://www.crh.noaa.gov/dmx/?n=firewx>

Meteorologist-in-Charge: Brenda Brock brenda.brock@noaa.gov
Fire Weather Focal Point: frank.boksa@noaa.gov

7. OTHER IMPORTANT NWS CONTACTS

Larry Van Bussum, National Fire Weather Operations Coordinator

National Interagency Fire Center (NIFC)
3833 South Development Avenue, Bldg 3807
Boise, ID 83705-5354
e-mail larry.vanbussum@noaa.gov
National Fire Weather web page <http://fire.boi.noaa.gov>

Gary Schmeling, Regional Operational Services Meteorologist (ROSM)

National Weather Service,
Central Region Headquarters
7220 NW 101st Terrace
Kansas City, MO 64153
email gary.schmeling@noaa.gov
Central Region web site <http://www.crh.noaa.gov>

Heath Hockenberry
National Fire Weather Program Leader
National Weather Service
3833 South Development Ave.
Boise, ID 83705
email heath.hockenberry@noaa.gov

B. PARTICIPATING AGENCIES

1. U.S. Forest Service (USFS)
 - a. Chequamegon National Forest in northern Wisconsin
 - b. Nicolet National Forest in northern Wisconsin
2. U.S. Fish and Wildlife Service (USFWS)
 - a. Necedah National Wildlife Refuge in Juneau County
 - b. Horicon National Wildlife Refuge in Dodge County
 - c. Leopold Wetland Wildlife Refuge in Columbia County
3. Bureau of Indian Affairs (BIA)
4. National Park Service
5. Wisconsin Department of Natural Resources (WDNR)

A LIST OF CONTACTS FOR THESE AGENCIES IS LOCATED IN THE APPENDIX.

III. SERVICES PROVIDED BY THE NWS

A. Basic Services

This section describes the fire weather products and services provided by the NWS as described in National Weather Service Directive NWSI 10-401. Since there are no full-time forecasters devoted solely to fire weather, fire weather duties are scheduled among other warning and forecast responsibilities. **However, spot forecasts for wildfires are treated with a high priority.**

Fire weather forecasts will be prepared by the NWS for various fire control agencies in Wisconsin on a seasonal time schedule from early spring to late fall. Start-up and termination of the fire weather season is mainly related to snow coverage across Wisconsin and will be requested by the fire control agencies.

History indicates spring to be the most active season for the fire weather user, since dead fuels are abundant and the relative humidity sometimes quite low. Fall may be another peak time for the fire weather agencies due to a new source of fuel from dead vegetation as a result of freeze damage.

Here are the general time periods for each season:

Spring season	March 15 to June 15
Summer season	June 15 to September 1
Fall season	September 1 through Thanksgiving weekend

The NWS is responsible for routine and non-routine forecasts, which include the Fire Weather Planning Forecast (FWF), NFDRS point forecasts, spot forecasts for prescribed burning and wildfires, Fire Weather Watches, Red Flag Warnings and Fire Danger Statements. Most of these products will be available on the Weather Information Management System (WIMS) and/or the internet web sites of the NWS and Eastern Area Coordination Center (EACC). The NWS web sites are listed in the Organizational Directory.

The web site for the EACC in the Great Lakes region is:

http://www.fs.fed.us/eacc/predictive_services/GreatLakesindex.htm

Some additional fire weather forecasts that can be obtained on this web site are the weekly, monthly and seasonal **fire potential outlooks**. Fire weather agencies are encouraged to remain informed on these outlooks.

Table 1 below outlines the responsibilities of each NWS office and their respective geographic area. Figure 1 also indicates area of responsibility.

Table 1.**Forecast times, product identifiers and area responsibility of NWS offices**

Office	7:00 AM LT 3:00 PM LT	Point forecast 3:15 PM CDT	Spot forecast on request	Watch/Warning, danger statement,	Fire district
Duluth	MSPFWFDLH	MSPFWMDLH	phone, web-based MSPFWSDLH	MSPRFWDLH MSPRFDDLH	955 956 957
Chanhassen	MSPFWFMPX	MSPFWMMPX	phone, web-based MSPFWSMPX	MSPRFWMPX MSPRFDMPX	961
La Crosse	MKEFWFARX	MKEFWMARX	phone, web-based MKEFWSARX	MKERFWARX MKERFDARX	962 963 964
Milwaukee/ Sullivan	MKEFWFMKX	MKEFWMMKX	phone, web-based MKEFWSMKX	MKERFWMKX MKERFDMKX	965 966 967
Green Bay	MKEFWFGRB	MKEFWMGRB	phone, web-based MKEFWSGRB	MKERFWGRB MKERFDGRB	958, 959 960 965

Note: The fire weather responsibility of fire weather zone 965 is shared by WFO Milwaukee/Sullivan and WFO Green Bay. WFO Sullivan/Milwaukee has fire weather responsibility for Marquette and Green Lake counties of zone 965, while WFO Green Bay has fire weather responsibility for Waushara County of zone 965.

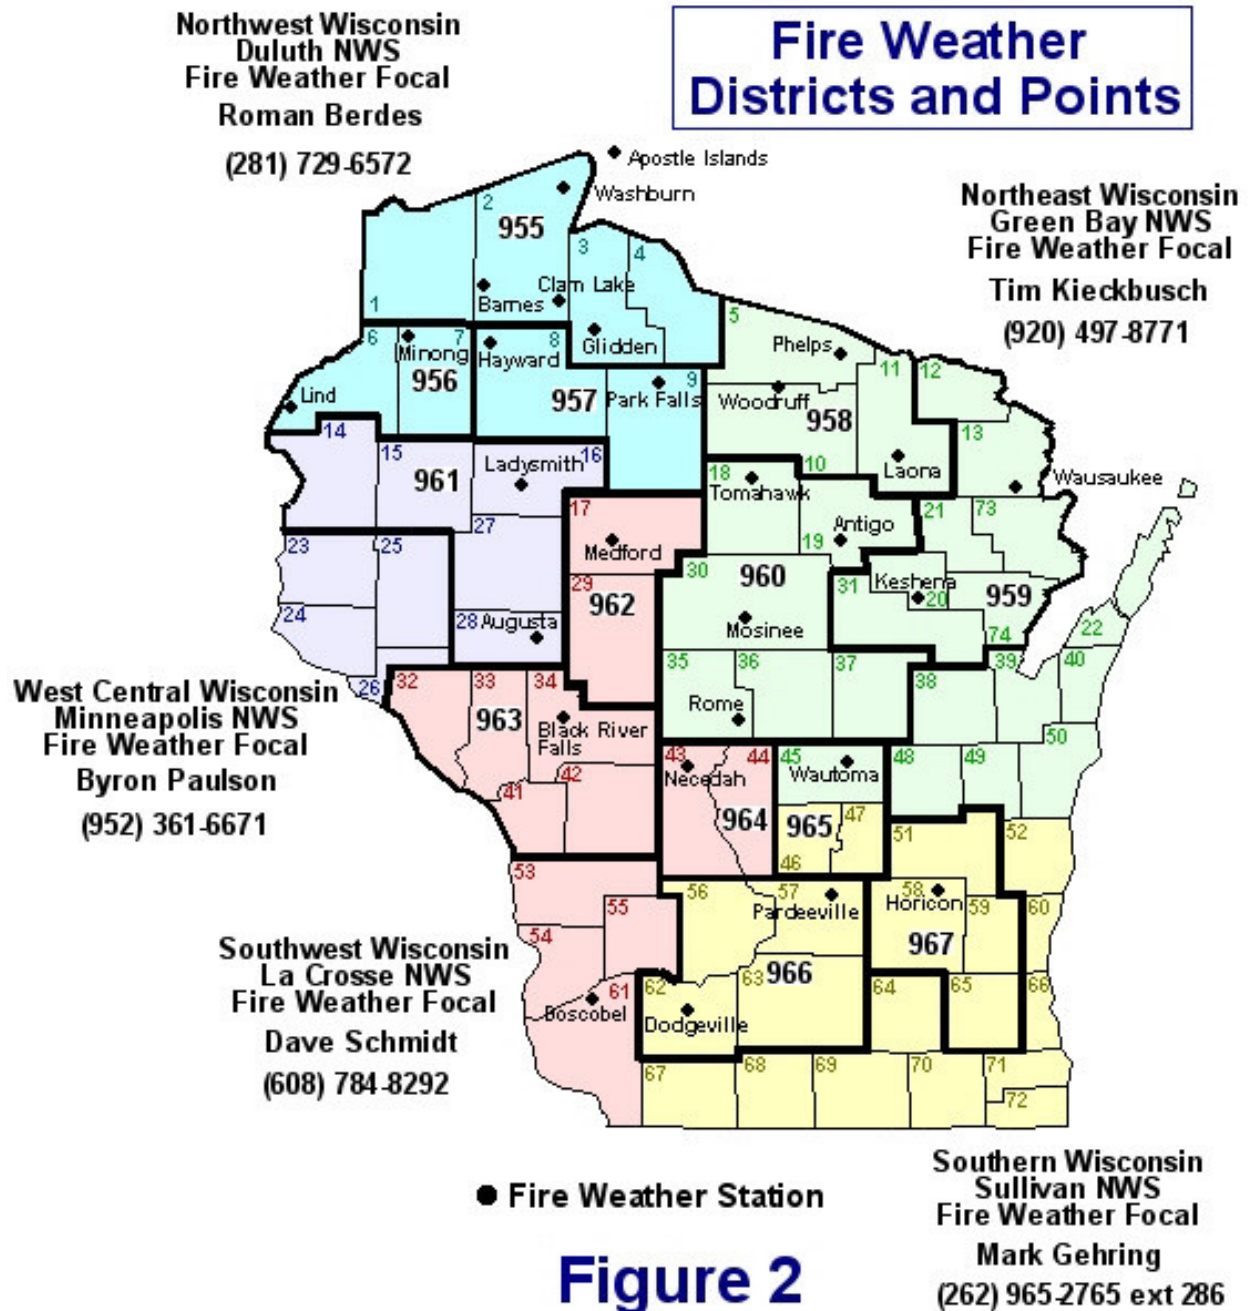

Figure 1. Forecast Areas

1. Planning Forecasts
2. NFDRS Point Forecasts

5. Red Flag Warning
6. Fire Danger Statements

1. Routine Fire Weather Planning Forecasts

The Fire Weather Planning Forecast is a zone-type product used by land management personnel. It is primarily for input in decision-making related to pre-suppression and other planning. The decisions impact firefighter safety, protection of the public and property, and resource allocation.

The morning and afternoon Fire Weather Planning Forecast (AWIPS/WIMS product **MKEFWFMKX, MKEFWFGRB, MKEFWFARX, MSPFWFMPX** or **MSPFWFDLH**) will be broken down into 74 zones with a zone number assigned to each Wisconsin county (**Figure 2**). Many zones will usually be combined to form one forecast group. The morning and afternoon forecast will be entered into the NWS AWIPS computer system by 700 AM LT and 3-330 PM LT respectively. They are then available to users via WIMS, NWS office web sites, or Predictive Services web sites at the GACCs.

The elements in the narrative forecast are:

Headline (Required for Red Flag Warnings and Fire Weather Watches)

- may also headline other significant weather concerns or changes.

Discussion

- written with enough detail to give users knowledge of weather causes during the forecast period. Brief enough to make radio dissemination as efficient as possible.
- provides frontal positions, movements and timing..
- serves as a vehicle to discuss reasoning for headlines or expected changes in critical parameters such as temperature, humidity, and wind

Sky/Weather

- sky and general weather conditions (Appendix F) including trends
- as specific as possible on timing, duration and coverage of precipitation
- as specific as possible on cloud coverage, type, and trends

High and low temperature

- temperature ranges should be kept as small as possible, 5 degrees or less

Relative humidity

- forecast daytime minimum and nighttime maximum
- humidity ranges of 5 percent when RH is 40 percent or less;
- a maximum range of 10% can be used for RH greater than 40 percent

20 ft. wind speed (mph) and direction

- as specific as possible on timing of significant speed and directional changes
- given in ranges of 5 mph or less and includes gusts
- forecast direction to nearest 8 cardinal compass points (northwest, north, southeast)

Other elements included:

Haines Index

- low level determined from the 950 - 850 MB level (about 1,000 ft to 5,000 ft.)
- attached to “DAY” periods
- provided by all NWS offices until June 1st unless requested to continue or resume at a later date

Smoke Management parameters

- depth of the mixing layer. The average mixing height from 12 to 18 hours local time.
- attached to “DAY” periods
- transport winds (speed and direction) in the mixing layer
dispersion index consisting of a number and a text ranking of poor, fair, good, or excellent (Appendix B explains the terms used in smoke management)
- provided by all NWS offices until June 1st unless requested to continue or to resume at a later date.

Hours of sunshine

- important for assessing probability of ignition of fine fuels (strong insolation can make them more likely to ignite)

Precipitation amount

- average area amount.

Extended forecasts

- added after each forecast group providing forecasts for the 3-7 day period .
- included are: sky/weather, temperature, with a wind forecast thru Day 7.

**Optional elements in narrative forecasts may vary slightly between NWS offices

Examples of the morning and afternoon Fire Weather Planning Forecast is located on pages 11-13. The morning format includes the first three forecast periods, while the afternoon forecast will include an additional 4th period.

Morning Planning Forecast Example:

FIRE WEATHER PLANNING FORECAST FOR (name of area)
NATIONAL WEATHER SERVICE LA CROSSE WI
600 AM CDT THU MAY 25 2006

...RED FLAG WARNING THIS AFTERNOON FOR STRONG WINDS AND LOW HUMIDITY IN WEST CENTRAL WISCONSIN...

.DISCUSSION. ...AT DAYBREAK A COLD FRONT WAS MOVING INTO THE EASTERN DAKOTAS. WARM DRY AIR WILL PUSH INTO SOUTHEAST MINNESOTA AND SOUTHWEST WISCONSIN AHEAD OF THE FRONT WITH AFTERNOON TEMPERATURES WARMING INTO THE 80S. EXPECT SURFACE WINDS TO INCREASE AS THE FRONT APPROACHES. STRONG SOUTHWEST WINDS WILL CAUSE THE RELATIVE HUMIDITY TO BE LOWER THAN THE PAST SEVERAL DAYS. BY SUNSET THE FRONT WILL PUSH INTO WESTERN WISCONSIN. EXPECT A FEW SHOWERS AND THUNDERSTORMS NEAR THE FRONT...BUT THE FRONT WILL REMAIN MOSTLY DRY. COOLER AND STABLE HIGH PRESSURE WILL THEN SETTLE ACROSS THE AREA THROUGH MIDWEEK.

 SOUTH WINDS 10 TO 15 MPH. CHANCE OF RAIN 70 PERCENT.
 .TUESDAY NIGHT...PARTLY CLOUDY. LOWS IN THE LOWER 50S. WEST WINDS 5 TO 10 MPH.
 .WEDNESDAY. .PARTLY CLOUDY. HIGHS IN THE MID 60S. NORTHWEST WINDS 10 TO 15 MPH.
 .WEDNESDAY NIGHT...CLEAR. LOWS IN THE MID 40S. NORTH WINDS 5 TO 10 MPH.
 .THURSDAY. .PARTLY CLOUDY. HIGHS IN THE MID 70S. SOUTH WINDS 10 TO 15 MPH.

\$\$

. . (other zone groups and forecasts from the remainder of the NWS office's county area of responsibility).

\$\$

FORECASTER NAME, INITIALS or NUMBER

***--These smoke management elements are required through June 1st. Users may request to continue beyond this date or resume them in the fall, depending on conditions.*

a) Updates to Fire Weather Planning Forecasts

Updates and a reason for an update will be provided whenever forecast conditions become unrepresentative. The format will be the same as the public zone forecast. For example, “updated for increased winds this afternoon”.

Additionally, updates will be made to the morning or afternoon Fire Weather Planning Forecasts for changes in red flag headlines which include:

1. New issuance of a fire weather watch or red flag warning.
2. Upgrading from a fire weather watch to a red flag warning.
3. Change an area outline of a fire weather watch or red flag warning.
4. Cancellation of a fire weather watch or red flag warning.

Also, updates will be made when the following conditions are met during a Fire Weather Watch or Red Flag Warning:

1. Precipitation occurrence or non-occurrence if different from the forecast.
2. Wind speed differs by more than 5 mph.
3. Temperature differs by more than 5 degrees Fahrenheit.
4. Relative Humidity differs by 10% or more.

2. NFDRS point forecasts

A point forecast will be issued for a fire weather user reporting an observation for any given day and must be entered into AWIPS by 315 PM CDT (215 PM CST). The point forecasts are then used to calculate output from the national fire danger rating system (NFDRS). The output is then used by land management agencies to determine fire danger levels and as a result to determine staffing and resource needs. NWS forecasters can retrieve this data under the AWIPS identifier **NMCFDICR**. Critical fire danger situations may exist when the energy release component (ERC) is 44 or higher in the q-fuel model (Jack Pine) and/or the 10 hour fuel moisture (10 H) is less than 10 %.

Up to 27 point forecasts may be issued on a particular day statewide with high fire danger levels. But during wet periods or after green-up, there is considerably less point forecasts requested, by agreement with land agencies. During periods of low fire danger, point forecasts may be terminated on weekends. In addition, after green-up in early June, and with the offering of a normal or wetter than normal summer, point and narrative forecasts may be terminated for all days until late summer, or when land agencies feel that point forecasts or narratives are again necessary.

Note: NWS Duluth will not provide point forecasts for their forecast area after June 1st unless specifically required and specifically requested by the user agencies.

A listing of observations from 1900 UTC is obtained from two separate transmissions at 1930 UTC and 2000 UTC. The transmissions are under the AWIPS identifier **NMCFWO CR**. After the point forecasts are issued, a third transmission of NMCFWO CR will list the point forecasts for that day. Point forecasts for NFDRS sites can be found under the identifiers MKEFWMMKX, MKEFWMGRB, MKEFWMARX, MSPFWMMSP or MSPFWMDLH. See **figure 2** for the location of NFDRS sites and **Table 2** for the format of the NFDRS forecasts. A catalog of all the NFDRS sites for Wisconsin is located in Appendix F.

Table 2. Fire weather point forecast coding reference

The format is: (commas but NO spaces)	
FCST,SSCCNN,YYMMDD,VT,W,TT,RH,L1,L2,DD,VV,M,TM,TN,HM,HN,P1,P2,WF	
STN # code SSCCNN where SS = State (21 is MN) CC = County NN = station	
SSCCNN - 6 digit station number from above	
YYMMDD - valid day of fcst - year/month/day The forecast made on April 10, 2006 for the 11th would be 060411	
VT - Valid time. always a 13 for 1300 CST (2pm CDT)	
W - State of the weather at 1300 CST tomorrow as shown below	
0	= less than 1/8 clouds
1	= 1/8 to 4/8 opaque clouds
2	= 5/8 to 7/8 opaque clouds
3	= cloudy
4	= fog
5	= drizzle
6	= rain
7	= snow/sleet
8	= showers
9	= thunderstorms
<i>(Note: categories 5, 6, or 7 set NFDRS indices to zero)</i>	
TT	= temperature for 1300 CST tomorrow
RH	= relative humidity for 1300 CST tomorrow
* L1	= lightning activity level (1400 CST today until 2300 CST). Always a "1" in Wisconsin
* L2	= lightning activity level (2300 CST today until 2300 CST tomorrow). Always a "1" in WI.
DD	= wind direction at 1300 CST tomorrow (8 point compass)
VV	= 20 ft wind speed in mph at 1300 CST tomorrow
M	= 10 hr fuel moisture (input by the users and left blank by the forecaster). Two commas will be noted next to each other
TM	= maximum temperature from 1300 CST to 1300 CST
TN	= minimum temperature from 1300 CST to 1300 CST
HM	= maximum humidity in percent from 1300 CST to 1300 CST
HN	= minimum humidity in percent from 1300 CST to 1300 CST
P1	= pcpn duration in hours from 1300 CST today till 0500 CST tomorrow
P2	= pcpn duration in hours from 0500 CST tomorrow till 1300 CST tomorrow
WF	= Wet Flag. A Y or N. It is used to indicate if fuels will be wet at 1300 CST. Use with caution, a "Y" will set all NFDRS indices to ZERO! In most cases a "N" is recommended.

3. Spot forecasts

a) Criteria - Spot forecasts are site specific forecasts in support of wildfire suppression and natural resource management. Spot forecasts for a wildfire will be treated with a priority similar to that of severe weather warnings. It is the responsibility of the requestor to indicate that the request is for wildfire suppression.

By Interagency Agreement (NWSI 10-406), the NWS will provide spot forecasts to any federal, state, tribal, or local official for support of a wildfire.

For non-wildfire purposes, resources permitting, the NWS will provide spot forecast service under the following circumstances and conditions:

- a. Upon request of any federal official who represents that the spot forecast is required under the terms of the Interagency Agreement for Meteorological Services (NWSI 10-406).
- b. Upon request of any state, tribal, or local official who represents that the spot forecast is required to carry out their wildland fire management responsibilities in coordination with a federal land management agency participating in the Interagency Agreement for Meteorological Services.
- c. Upon request of any public safety official who represents that the spot forecast is essential to public safety. A “public safety official” is an employee or contract agent of a government agency at any level (federal, state, local tribal, etc.) charged with protecting the public from hazards, including wildland fires of whatever origin and/or other hazards influenced by weather conditions such as hazardous material release.

The NWS will not provide spot forecasts to private citizens or commercial entities not acting as an agent of a government agency.

Requestor Identification - The requestor for each spot forecast must provide the following information before a spot forecast can be issued.

- a. Name
- b. Government agency
- c. Address and phone number
- d. Representation as to the reason for the spot forecast, which must be one of the reasons indicated above.

A current on-site weather observation should accompany the forecast request. The requestor should specify how the wind measurement was obtained (20 foot or eye-level). In the case of a wildfire or prolonged prescribed burn, updated observations should be provided during the course of the event. Land management personnel should contact the

servicing NWS office if forecast conditions appear unrepresentative of actual weather conditions. Spot forecasts should be considered one-time requests, and are not routinely updated unless representative observations are available to the forecaster. Feedback from land management personnel is also encouraged during or after the burn.

Users are asked to read the Fire Weather Planning Forecast before making a spot forecast request. To hold the number of spot forecasts to a manageable level, internal coordination and planning should be done by user agencies making forecast requests.

b) Content and Format - The standard format for wildfire spots includes: headlines (Red Flag Warning or Fire Weather Watch) explaining what, when, where and why; discussion, sky/weather, temperature, relative humidity, and wind. Other optional elements may also be provided. See example below.

The content of non-wildfire spots should conform to the standard format for wildfire spots, though the content and number of forecast periods may be different, as determined by the requestor. Users should be as specific as possible when making a forecast request.

c) Procedures - An Internet-based program, NWS Spot, is the national standard for requesting, issuing, and retrieving spot forecasters. This program is available on NWS web sites. Spot forecasts can also be requested by phone or fax. A phone call must accompany the fax request so the forecaster is aware of the request.

The requesting agency should provide information about the location, topography, fuel type(s), size, ignition time, and a contact and telephone number of the responsible land management official. When possible, a representative weather observation should accompany the request. As indicated above in section 3a, requestor information justifying the spot forecast request must also be provided for the forecast request to be honored.

Feedback to the NWS providing the spot forecast is highly encouraged.

SPOT FORECAST FOR LUND WILDFIRE
NATIONAL WEATHER SERVICE MILWAUKEE/SULLIVAN
1100 AM CDT TUE APRIL 4 2006

IF CONDITIONS BECOME UNREPRESENTATIVE CONTACT THE NWS.

...RED FLAG WARNING FOR STRONG WINDS AND LOW HUMIDITY FOR
SOUTHERN WISCONSIN UNTIL 6 PM...

DISCUSSION...STRONG LOW PRESSURE WILL MOVE FROM THE CENTRAL PLAINS
TO NORTHWEST WISCONSIN TODAY. GUSTY SOUTHWEST WINDS WILL BRING
VERY WARM AND DRY AIR INTO SOUTHERN WISCONSIN.

TODAY

SKY/WEATHER.....PARTLY SUNNY AND WINDY.
TEMPERATURE.....75-80
MIN HUMIDITY20-25%
20 FOOT WIND.....SOUTHWEST 20 TO 25 MPH

TONIGHT

SKY/WEATHER.....MOSTLY CLEAR
TEMPERATURE.....50 TO 55
MAX HUMIDITY.....80 TO 85 PERCENT
20 FOOT WIND.....WEST 10 TO 15 MPH

MONDAY

SKY/WEATHER.....PARTLY CLOUDY.
TEMPERATURE.....60 TO 65
MIN HUMIDITY.....30 TO 35 PERCENT
20 FOOT WIND.....NORTHWEST 10 TO 15 MPH.

FORECASTER...(OPTIONAL)

\$\$

REQUESTING OFFICIAL...JOHN DOE
REASON FOR REQUEST...WILDFIRE

Standardized spot weather forecast for a wildfire during a Red Flag Warning.

4. Fire Weather Watches, Red Flag Warnings, Fire Danger statements

NWS offices will issue Fire Weather Watches and Red Flag Warnings when the combination of dry fuels and weather conditions support extreme fire danger. The WDNR and USFS are responsible for keeping the NWS aware of fuel conditions that could lead to extreme fire danger. The NWS will coordinate with these primary user agencies prior to issuing Fire Weather Watches and Red Flag Warnings. See the call list under section 4. C. – Procedures.

User agencies will handle all public and media questions about fire potential and danger. The NWS will answer questions only about weather conditions, and will not comment on fire conditions.

The issuance of these products is typically a two-stage process.

A. Fire Weather Watch

A Fire Weather Watch is issued when there is a reasonable level of confidence for the development of a red flag event. A watch will be issued 12 to 72 hours in advance of the expected onset of criteria. **A watch will only be issued (or continued) in the first 12-hour time period for dry thunderstorm events.** Red flag criteria are listed below. All four of the following weather conditions, including the dryness of the fuels, must be anticipated for a watch to be issued.

1. Sustained ten-minute winds at the 20 foot level are at or above 15 mph.
2. Minimum relative humidity at or less than 25 percent.
3. Temperatures at or greater than 75 degrees F.
4. The dryness of the fuels will be determined by looking at the Energy Release Component (ERC - NFDRS output) 44 or higher in Q-fuel model (jack pine) (do not consider if the ERC for the current day is below 38; ERC changes slowly) and visual observations. The WDNR and, if necessary, the USFS, will provide this information to the NWS. See the call list (under section 4. C. - Procedures) to determine who the NWS should contact for this information.

Other factors which may be considered if any of the above are marginal:

- The surface dew point depression (best indicator of high fire danger) is more than 40 F.
- The 850 mb dew point depression is greater than 18F (10C).
- It is before spring green-up (usually by June 1st).
- It is after the fall color change or a killing frost.
- The area has been in a dry spell for a week or more

- Dry lightning is anticipated (rare, except during periods of drought)
- Gusty winds in excess of 50 mph (can result in trees falling on power lines, causing power line to breaks and sparking fires) are expected.
- NFDRS values are in the high to extreme categories.
- 10-hour fuel moisture is less than 10%
- Access behavior on prescribed burns in the area the past several days.
- Haines Index values are in the moderate to high category (5 or 6)

The most common red flag or near red flag synoptic weather situations:

- Strong low pressure moving from the north or central U.S. Rockies to Lake Superior, or a strong Alberta Low tracking to near Lake Superior. Both situations require a windy dry slot associated with a low level jet.
- A departing Hudson Bay High Pressure replaced by the strong low pressure scenario. The high pressure area provides Wisconsin with dry easterly winds and subsiding air. This will effectively dry out the fuels.

Fire Weather Watch coordination and issuance:

- NWS offices will coordinate the issuance, change and cancellation of Fire Weather Watches with the WDNR and USFS. If these users observe wet fuels (by monitoring the Energy Release Component) and do not believe a watch should be issued, then do not issue the watch.
- During situations of borderline criteria for a Red Flag Warning or when a Fire Weather Watch is in effect, the NWS is encouraged to use terminology such as “severe fire weather conditions may occur Monday afternoon” or “critical fire weather conditions may be met”. These terms may be used in the discussion section of the Fire Weather Watch and Fire Weather Planning Forecast.
- It’s also encouraged as a headline in the Fire Weather Planning Forecast when a watch is not in effect. The term “red flag” should only be used in a Red Flag Warning. A Fire Weather Watch will not be disseminated on NOAA Weather Radio.
- A Fire Weather Watch will be headlined in the Fire Weather Planning Forecast . The headline will include what, when, where and why. Headlines belong before the discussion and before each zone grouping of the Fire Weather Planning Forecast.
- A Fire Weather Watch message (RFW) is also issued which describes the affected area, time the watch is in effect and the reasons for issuance. A RFW shall have a UGC coding line followed by a Valid Time Event Code (VTEC). Identifiers for each office are MKERFWMKX, MKERFWGRB, MKERFWARX, MSPRFWMPX AND MSPRFWDLH.

B. Red Flag Warnings

A Red Flag Warning is issued when there is a high probability that all four weather criteria listed under the Fire Weather Watch section of this plan are imminent or will be met within 24 hours. The WDNR and the USFS will monitor the Energy Release Component (ERC) to help them determine the dryness of the fuels. A Red Flag Warning will be issued immediately when red flag conditions are occurring, but will be coordinated prior to issuance with WDNR and USFS.

The NWS may also monitor the Energy Release Component (ERC) by going to the WDNR or Eastern Area Coordination Center (EACC) Internet site. These sites will help the NWS monitor the dryness of the fuels in the state.

Red Flag Warning coordination and issuance:

- NWS offices will coordinate the issuance, change and cancellation for Red Flag Warnings with the WDNR and USFS. If the WDNR and USFS observe wet fuels and do not believe a warning should be issued, then do not issue the warning. A Red Flag Warning will not be disseminated on NOAA Radio.
- A Red Flag Warning will be headlined in the routine Fire Weather Planning Forecast (FWF). The headline will include what, when, where and why. Headlines belong before the discussion and before each zone grouping of the Fire Weather Planning Forecast.
- A Red Flag Warning message (RFW) is also issued which describes the affected area, time the warning is in effect and the reasons for issuance. A RFW shall have a UGC coding line followed by a Valid Time Event Code (VTEC). Identifiers for each office are MKERFWMKX, MKERFWGRB, MKERFWARX, MSPRFWMPX AND MSPRFWDLH.

Cancellation of Fire Weather Watches and Red Flag Warnings

When conditions warrant that a Fire Weather Watch or Red Flag Warning is no longer needed, it should be cancelled by the NWS as soon as possible. **Note: A cancellation statement is not needed if upgrading from a watch to a warning, or for a Red Flag Warning that is being allowed to expire.**

1. The cancellation will be coordinated with the users.
2. The cancellation will be headlined in the Fire Weather Planning Forecast.
3. A cancellation statement under the RFW message shall be issued. A RFW shall have a UGC coding line followed by a Valid Time Event Code (VTEC).

Updates to fire weather planning forecasts when red flag conditions are present

Updates will be made to the morning or afternoon forecasts for changes in red flag headlines which include:

1. New issuance of a Fire Weather Watch or Red Flag Warning.
2. Upgrading from a Fire Weather Watch to a Red Flag Warning.
3. Change an area outline of a Fire Weather Watch or Red Flag Warning.
4. Cancellation of a Fire Weather Watch or Red Flag Warning.

In addition, updates will be made when the following conditions are met when a Fire Weather Watch or Red Flag Warning has been issued:

1. Precipitation occurrence or non-occurrence if different from the forecast.
2. Wind speed differs by more than 5 mph from the forecast.
3. Temperature differs by more than 5 degrees Fahrenheit from the forecast.
4. Relative Humidity differs by 5 % or more from the forecast.

C. Procedures for calling the WDNR and USFS during potential RFW situations.

Prior to the issuance of Fire Weather Watches or Red Flag Warnings, NWS offices will place a call to the WDNR. Where USFS lands may be impacted, they, too, will be contacted, as indicated below.

Once officials from the appropriate agencies are reached, they must agree to what is being requested by the NWS before the NWS will issue a Fire Weather Watch or Red Flag Warning. If there is not an agreement, on the request, then the NWS will not issue the Fire Weather Watch or Red Flag Warning. If the NWS is not able to contact any of the below listed officials, then they should not issue the Fire Weather Watch or Red Flag Warning.

1. First call made to WDNR

Blair Anderson
Office Phone - (608) 264-6032
Cell Phone - (608) 220-0168
Home Phone - (608) 588-7803
Pager Number - (608) 376-6011

2. Second call made to WDNR

Trent Marty
Office Phone - (608) 266-7978
Cell Phone - (608) 206-7077
Car Phone - (608) 575-8578
Home Phone - (608) 831-1104
Pager Number - (608) 376-6007

3. Third call made to WDNR

Jim Barnier-Wisconsin Dells
Office Phone - (608) 253-6714
Fax - (608) 253-4708
Home Phone - (608) 847-3668
Cell Phone - (608) 547-1519
Pager Number - (608) 376-6008

1. First call made to USFS

Jim Grant
Office Phone - (715) 362-1341
Cell Phone - (715) 493-9137
Home Phone - (715) 362-2319

2. Second call made to USFS

Steve Radaj
Office Phone - (715) 358-6863
Cell Phone - (715) 493-6934
Home Phone - (715) 272-1450

1. Call to EACC as alternate to WDNR and/or USFS

Steve Marien
Office Phone - (612) 713-7300
Cell Phone - (651) 283-3366
Home Phone - (651) 731-6408

RED FLAG WARNING
NATIONAL WEATHER SERVICE LA CROSSE WI
932 AM CDT WED OCT 20 2004

...RED FLAG WARNING IN EFFECT FROM 4 PM CDT THIS AFTERNOON TO 8 PM CDT THIS EVENING FOR
SOUTHEAST MINNESOTA...
...FIRE WEATHER WATCH REMAINS IN EFFECT FROM 8 AM CDT THURSDAY MORNING TO 6 PM THURSDAY
EVENING FOR PORTIONS OF SOUTHEAST MINNESOTA...WEST CENTRAL AND SOUTHWEST WISCONSIN...

.A STRONG COLD FRONT WILL MOVE ACROSS WESTERN AND CENTRAL MINNESOTA THIS AFTERNOON AND
EVENING BRINGING GUSTY WINDS AND LOW RELATIVE HUMIDITIES. THE MOST CRITICAL FIRE WEATHER
CONDITIONS WILL OCCUR AHEAD OF AND ALONG THE FRONT ACROSS SOUTHEAST MINNESOTA. BY THURSDAY
AFTERNOON...THE FRONT WILL HAVE MOVED INTO WESTERN WISCONSIN. THOUGH TEMPERATURES WILL BE A
BIT COOLER...WINDS AND HUMIDITIES MAY BE CLOSE TO CRITICAL VALUES ACROSS PORTIONS OF
SOUTHEAST MINNESOTA...WEST CENTRAL AND SOUTHWEST WISCONSIN THURSDAY AFTERNOON.

MNZ079-086-087-094-095-202000-
/T.UPG.KARX.FW.A.0001.041020T2100Z-041021T0100Z/
/T.NEW.KARX.RF.W.0001.041020T2100Z-041021T0100Z/
WABASHA-DODGE-OLMSTED-WINONA-MOWER-FILLMORE-HOUSTON-
932 AM CDT WED OCT 20 2004

...FIRE WEATHER WATCH HAS BEEN UPGRADED TO A RED FLAG WARNING IN
EFFECT FROM 4 PM CDT THIS AFTERNOON TO 8 PM CDT THIS EVENING FOR SOUTHEAST MINNESOTA...

THE NATIONAL WEATHER SERVICE IN LA CROSSE HAS ISSUED A RED FLAG
WARNING...AND REPLACED THE FIRE WEATHER WATCH.

A RED FLAG WARNING MEANS THAT CRITICAL FIRE WEATHER CONDITIONS
ARE EITHER OCCURRING NOW...OR WILL SHORTLY. A COMBINATION OF
STRONG WINDS...LOW RELATIVE HUMIDITY...AND ABNORMALLY WARM TEMPERATURES WILL CREATE
EXPLOSIVE FIRE GROWTH POTENTIAL THIS AFTERNOON INTO THIS EVENING. THE WINDS ARE EXPECTED TO
TAPER OFF AROUND SUNSET. ALSO, THE RELATIVE HUMIDITY IS EXPECTED TO RISE ABOVE CRITICAL
VALUES BY THEN.

PLEASE ADVISE THE APPROPRIATE OFFICIALS OR FIRE CREWS IN THE FIELD OF THIS RED FLAG WARNING.

$$

```

Figure 3. Example of a Red Flag Warning. Fire Weather Watches would follow the same format.

NOTE: DO NOT USE THE PHRASE “RED FLAG” IN A FIRE WEATHER WATCH PRODUCT. INSTEAD, USE PHRASES SUCH AS “CRITICAL FIRE WEATHER CONDITIONS” OR “EXTREME FIRE WEATHER CONDITIONS” TO DESCRIBE THE SITUATION.

D. Fire Danger statements

The Fire Danger statement is a miscellaneous product which provides advisory information on rangeland and/or grassland fire potential or conditions. Fire danger statements **RFD** will not be initiated by the NWS offices even if a Fire Weather Watch or Red Flag Warning is issued.

Only by the direct request of the USFS/WDNR will a statement be issued and then they will provide us with the information to put in the body of the statement. The terms Fire Weather Watch and Red Flag Warning will not be used. At the request of the user agency, the fire danger statement may be broadcast on NOAA Weather Radio. Fire Danger Statements can be found under MKERFDMKX, MKERFDGRB, MKERFDARX, MSPRFDMPX AND MSPRFDLH.

Note: User agencies will normally handle all public and media questions about fire potential and danger. The NWS will answer questions only about weather conditions, and should not comment on fire conditions.

WIZ005-010>013-018>021-020000

FIRE DANGER STATEMENT
NATIONAL WEATHER SERVICE GREEN BAY WI
730 AM CST TUE APR 01 2003

DISCUSSION...TEMPERATURES WILL RISE TO NEAR 80 DEGREES...WITH HUMIDITY FALLING TO AROUND 20 PERCENT ACROSS NORTH CENTRAL AND NORTHEAST WISCONSIN THIS AFTERNOON. IN ADDITION...SOUTHWEST WINDS WILL INCREASE TO 25 TO 35 MPH IN ADVANCE OF A STRONG CANADIAN COLD FRONT. THE FRONT IS FORECAST TO MOVE THROUGH THE AREA BETWEEN 3 AND 5 PM THIS AFTERNOON...WITH STRONG NORTHWEST WINDS DEVELOPING IN ITS WAKE. CRITICAL FIRE WEATHER CONDITIONS SHOULD CONTINUE UNTIL 6 PM...WITH DECREASING WIND AND INCREASING HUMIDITY EXPECTED AFTER THAT TIME.

PLEASE ADVISE ALL FIRE MANAGEMENT OFFICERS...DISPATCHERS AND FIELD PERSONNEL OF THIS FIRE DANGER STATEMENT.

\$\$

NOTE: DO NOT USE THE PHRASE "RED FLAG" IN A FIRE DANGER STATEMENT. INSTEAD, USE PHRASES SUCH AS "CRITICAL FIRE WEATHER CONDITIONS" OR "EXTREME FIRE WEATHER CONDITIONS" TO DESCRIBE THE SITUATION.

5. Verification and Participation in Interagency Groups

1. Verification

Fire weather program leaders will verify the red flag program. Results will be distributed to the NWS regional fire weather program managers as well as the appropriate State and Federal user groups in Wisconsin. Red Flag Warnings will be verified based on the Probability of Detection, False Alarm Rate, Critical Success Index, and Lead Time.

2. Participation in Interagency Groups

NWS offices providing fire weather services for Wisconsin are expected to participate in the Annual State Fire Meeting. This meeting serves as a forum for interaction between NWS program leaders and their interagency users. It also provides an effective vehicle for discussions pertaining to changes to the Annual Operating Plan.

6. Special Services -The NWS provides a cadre of trained Incident Meteorologists (IMETs) who will provide on-site forecasting when requested by land management agencies. A certified IMET is on staff at the Minneapolis/Chanhassen NWS office. In addition to wildfires, IMETs may be dispatched to support:

1. Critical resource value prescribed burns.
2. Land management coordination and dispatch centers
3. Hazardous substance release
4. Any special projects or incidents which fall under the mandate of the NWS.

By Interagency Agreement, the NWS will support land management agency requests for on-site meteorological support for wildland fires through the IMET program. Other events listed above may be supported depending upon resource availability, if requested by federal fire agencies participating in the Interagency Agreement or if requested by public safety officials who represent such support as essential to public safety.

1) Only certified IMETS may be dispatched to support on-site service and operate the AMRS. The NWS is responsible for maintaining proficiency of designated IMETs.

2) An Atmospheric Theodolite Meteorological Unit (ATMU) is cached at the Region 9 Cache in Grand Rapids, MN. The laptop computer and All Hazards Meteorological Response Unit (AMRS), which contains a satellite dish for data receipt, are cached at the NWS office in Minneapolis.

3) Land management agencies are responsible for transporting the ATMU. Helium will also be ordered for the ATMU upon request of the IMET. The IMET will be responsible for transporting the laptop computer and AMRS.

- 4) The NWS is responsible for assembly and operation of this equipment, calibration of instruments, ordering contract repair, and, if necessary, scheduling training sessions.
- 5) Request and dispatch of IMETs and equipment (ATMU, AMRS, and FireRAWS (if ordered) is accomplished through the National Resource Coordination System. If the IMET in Minneapolis is unavailable, the request will be sent to the Eastern Area Coordination Center (EACC). They will in turn forward the request to the NWS National Fire Weather Operations Coordinator (NFWOC) in Boise who will fill the order. If the Minneapolis IMET is not available, the Meteorologist-in-Charge will promptly notify the dispatch center that the order cannot be filled.
- 6) Incident Operations - The IMET must be provided a work area free from rain and wind as well as telephone access for computer use. The line is typically shared with the Fire Behavior Analyst. A source of power is also necessary (generator is OK). The IMET will work the hours and perform the forecast tasks required by the Incident Management Team. When a fire is declared contained or controlled, the IMET will assess the time requirement for further support in conjunction with the FBAN and Plans Section Chief.
- 7) Reimbursement for Services Provided - The NWS will be reimbursed for all costs associated with on-site operation as set forth in the Interagency National Agreement located in the Appendix of this plan or at <http://www.weather.gov/directives> under Section 10 Operations and Services, NDS 10-4. These include overtime costs associated with the deployment, travel costs and per diem, telecommunication services, as well as costs incurred by the NWS IMET duty station, such as covering shifts vacated by the IMET. After each deployment, the IMET will prepare a Report of Reimbursable Expenses. The NWS will recover costs, based on this report.

7. Training

- 1) Forecaster training** - NWS forecasters producing fire weather forecasts shall be trained. Forecasters must fulfill the following requirements as set forth in NWSI 10-405:
 - a. Complete the NWS Fire Weather computer based learning module and S-290, Intermediate Wildland Fire Behavior (either by computer based training or residence training.)
 - b. Local training generally consists of review of the AOP, the Fire Weather Station Duty Manual and other station instructions, as well as training established by the Fire Weather Program Leader.
 - c. Forecasters must also be familiar with all NWS fire weather products and services and become proficient in the preparation and dissemination of these products.

2. IMET Training and Certification requirements are detailed in NWSI 10-405.

3. NWS provided training to land management agencies - when NWS staff provides training to land management personnel, costs above planned salary and operating costs will be borne by the benefiting agency(s). Billing procedures are described in the Interagency Agreement for Meteorological Services between the NWS and Land Management Agencies.

IV. WILDLAND FIRE AGENCY SERVICES AND RESPONSIBILITIES

A. OPERATIONAL SUPPORT AND PREDICTIVE SERVICES - the GACC meteorologist at the EACC at Fort Snelling, Minnesota combines forecast information from NWS offices and other sources into area-wide summaries and briefings. This meteorologist, along with Fire Intelligence forms the Predictive Services group which produces fire weather/fire danger assessments for Wisconsin. These value added products enhance short and long range forecasts issued by the NWS to assist land managers in allocating fire-fighting resources. Products issued by the EACC are available on line at:

http://www.fs.fed.us/eacc/predictive_services/GreatLakesindex.htm

Mailing address:

Eastern Area Coordination Center
1 Federal Drive PO Box 29
St. Paul, MN 55111-4080
Phone 612-713-7300
Center Manager, Dave Boyd
Meteorologist, Stephen Marien

Physical address:

Eastern Area Coordination Center
BHW Federal Building
1 Federal Drive G-20
Fort Snelling, MN 55111
Deputy Center Manager, Laura McIntyre-Kelly
612-713-7315

B. AGENCY COMPUTER SYSTEMS - The communication system used to link the NWS with its users is the Weather Information and Management System (WIMS). The NWS receives user agency observations entered into WIMS via its AWIPS computer system. Point and narrative forecasts are also sent to WIMS via this system. Observations and forecasts are exchanged between WIMS and AWIPS in the USFS Kansas City Computer Center.

C. FIRE WEATHER OBSERVATIONS - All fire weather observations in Wisconsin are from automated sites and all have GOES antennas installed for data transmission. Station inspection and instrument maintenance are the responsibility of land management agencies. NWS forecasters may monitor data quality from observation sites. Any NWS travel expenses for equipment maintenance or station visitation will be reimbursed by the Wildland Fire Agency making the request. The NWS is responsible for assigning station numbers to NFDRS weather sites.

TRAINING -- agencies will reimburse the NWS for all costs incurred for IMET support as well as for training assistance or station visitation.. Procedures are detailed in the Interagency National Agreement.

A. Meteorological training can be provided either by NWS or the EACC meteorologist. Each NWS office has at least one person, typically the Fire Weather Program Leader, who is qualified to teach courses up through Intermediate Fire Behavior (S-290). Requests for NWS training should be directed to that office's Fire Weather Program Leader or MIC. Sufficient advance notice should be given to allow for preparation as well as scheduling. Costs incurred by the NWS will be reimbursed by the requesting agency.

B. NWS Fire Weather Program Leaders will participate in coordination conference calls, primarily in the spring fire season. This duty will be shared by the program leaders. The NWS representative should be prepared to provide a statewide briefing highlighting significant weather trends as well as possible critical fire weather situations.

This document will be effective approximately from March 15, 2006 to March 15, 2007.

VIII. APPENDICES

- A. Haines Index
- B. Smoke Management
- C. Address and Phone Directory (Not included)
- D. FTS Stations
- E. NFDRS Raws Site Catalog and contact list
- F. Precipitation and sky terminology and NOAA Radio
- G. Interagency Agreement for Meteorological Services
(Not included)

APPENDIX A

HAINES INDEX

What is the Haines Index?

The Haines Index combines the effects of dry air and instability to determine the potential for large fire growth. Its purpose is to identify weather conditions that may allow an existing fire to spread rapidly or exhibit extreme fire behavior. It should NOT be used to predict the potential or probability for wildfires to ignite. No such danger or wording will be conveyed in any NWS products. The Haines Index is most applicable to plume-dominated fires. The Haines Index does not account for wind.

The Haines Index contains two components, one to assess the dry air, and the other to measure the instability. Dry air affects fire behavior by lowering fuel moisture, which increases the amount of fuel available to the fire and enhances the probability of spotting. Instability is caused by warming the lower levels of the atmosphere, cooling the higher levels, or by a combination of the two processes. An unstable air mass promotes the formation of rising currents of air and thus increases the vertical extent of a smoke column. Wildfires that burn in a dry, unstable environment can become plume-dominated and are often able to generate their own strong surface winds. Ground elevation will determine which of three levels in the atmosphere will be used to compute the Haines Index. In Wisconsin, the low-level layer between 950 mb and 850 mb will be used.

Computing the Haines Index

Haines Index = Stability + Moisture = A + B

Stability Term = 950 MB Temperature - 850 MB Temperature

Let A equal the following values according to the temperature differences

A = 1 when stability term is 3 degrees C or less

A = 2 when stability term is 4 to 7 degrees C

A = 3 when stability term is 8 degrees C or more

Large positive values of the stability term indicate an unstable layer of the atmosphere near the earth's surface. Negative values indicate a temperature inversion.

Moisture Term = 850 MB Temperature - 850 MB Dew Point Temperature

B = 1 when moisture term is 5 degrees C or less

B = 2 when moisture term is 6 to 9 degrees C

B = 3 when moisture term is 10 degrees C or more

The value of the moisture term will always be positive. The greater the value of this term, the drier the air is.

Significance of the Haines Index values

- 2 or 3 Very Low (moist, stable air)
- 4 Low
- 5 Moderate
- 6 High (dry, unstable air)

An example calculation

950 MB Temperature = 27 degrees C

850 MB Temperature = 18 degrees C

850 MB Dew Point = 14 degrees C

Haines Index = Stability (A) + Moisture (B)

From the tables above

950 MB Temp - 850 MB Temp = $27 - 18 = 9$ A Stability term of 9, so let $A = 3$.

850 MB Temp - 850 MB Dew point = $18 - 14 = 4$ A Moisture term of 4, so let $B = 1$.

$A + B = 3 + 1 = 4$.

An Index value of 4 corresponds to a “Low” category. The conclusion is that extreme fire behavior would not be expected on this day.

APPENDIX B

SMOKE MANAGEMENT

The Clean Air Act requires land management agencies to address the issue of smoke management in its prescribed burns. The goal is to burn in atmospheric conditions that would encourage smoke to rise to such a level that the smoke is dispersed as much as possible to reduce a number of health and safety risks near the fire.

The National Weather Service will support the smoke management efforts of federal, state, and local agencies as well as organizations involved in such burning. **The NWS will provide the mixing height, transport wind and dispersion index in the “daytime” portions of the fire weather planning forecast through May 31st. These values will represent the average values from noon to 6 pm.** The NWS will also include the mixing height, transport wind and dispersion index, upon request of the land agency, in spot forecasts.

The three weather parameters of smoke management forecasts are mixing layer (or height), transport winds, and dispersion index. For smoke management purposes, the mixing layer is usually considered the lowest layers of the atmosphere bounded by the earth’s surface and the bottom of any temperature inversion which may exist aloft. If a temperature inversion is based at the surface, then there is no mixing layer. A temperature inversion would serve to trap smoke at low levels, or would prevent sufficient lofting of smoke to a level where winds would dilute or transport it away from the area. See the figure below. Three upper air temperature profiles which affect smoke dispersal differently. a) a surface-based inversion is an absolutely stable condition that traps smoke and prevents lofting. b) An elevated inversion is unstable or neutral and allows limited smoke rise, but the smoke will stop rising

at the base of the inversion aloft. c) When no inversions are present, smoke is free to rise. However, the existing (ambient) lapse rate will determine the rate of rise and the plume characteristics.

The transport wind is defined as the average wind speed and direction through the mixing layer.

The transport wind may suggest the need for surveillance or resource location at downstream areas for the purpose of minimizing the danger posed by spotting due to firebrands and to determine the impacts of smoke on a sensitive area.

The Dispersion Index is intended to serve as a single adjective index which describes how smoke will disperse on that day. The Dispersion Rate is given by the following formula:

$$\text{Dispersion Rate} = (\text{Mixing Height}) \times (\text{Transport Wind})$$

Mixing height is in feet, and transport wind is in mph.

The Minnesota Smoke Management Plan (SMP) suggests the following interpretation of the values:

Dispersion Index	Dispersion Rate
< 13,000	Poor
13,000 - 29,999	Fair
30,000 - 59,999	Good
60,000 or greater	Excellent

These values are also applicable in Wisconsin.

The SMP contains guidelines for using the index and should be consulted for those details.

Smoke management data for the morning fire weather planning forecast are obtained from the 7 a. m. (1200 UTC) morning upper air soundings taken at International Falls, MN, Chanhassen, MN and Green Bay, WI. Sounding data are normally available by 730 a.m. CDT.

Most smoke management inputs to software programs and nomograms are in metric units. A table for conversion among various units is provided on the next page.

Smoke management models require input of parameters in metric units. The National Weather Service uses a variety of units of measure for wind and height. To minimize confusion and to make the conversion of units easier, the following conversion factors will prove helpful.

Multiply	By	To get
Feet	0.308	Meters
Feet	0.0152	Chains
Statute Miles	1609.34	Meters
Statute Miles	1.60934	Kilometers
Statute Miles	0.8684	Nautical Miles
Statute Miles	80	Chains
Nautical Miles	0.6080	Feet

APPENDIX E

NFDRS RAWS SITE CATALOG AND CONTACT LIST

IF WEATHER OBSERVATIONS APPEAR TO BE INACCURATE, PLEASE CONTACT THE APPROPRIATE DISPATCHER SO THAT THE WEATHER STATION CAN BE SERVICED.

NWS GREEN BAY CWA

PHELPS 470502 WDNR LAT: 46.04N LONG: 89.10W ELEV: 1770 FT.
AREA DISPATCHER: STEVE RADAJ (USFS-WOODRUFF) (715) 358-6863
SOIL TYPE: SAND LOAM/PEAT

WOODRUFF 471002 WDNR LAT: 45.89N LONG: 89.65W ELEV: 1600 FT.
AREA DISPATCHER: DAVE CHRISTENSON (WDNR-WOODRUFF) (715) 358-9216
SOIL TYPE: SAND LOAM

LAONA 471101 USFS LAT: 45.56N LONG: 88.68W ELEV: 1580 FT.
AREA DISPATCHER: STEVE RADAJ (USFS-WOODRUFF) (715) 358-6863
SOIL TYPE: SILT LOAM/SAND LOAM NEARBY

WAUSAUKEE 471301 WDNR LAT: 45.39N LONG: 87.97W ELEV: 763 FT.
AREA DISPATCHER: STEPHANIE JONES (WDNR-PESHTIGO) (715) 582-5040
SOIL TYPE: SAND LOAM

TOMAHAWK 471801 WDNR LAT: 45.47N LONG: 89.80W ELEV: 1470 FT.
AREA DISPATCHER: DAVE CHRISTENSON (WDNR-WOODRUFF) (715) 358-9216
SOIL TYPE: SAND

ANTIGO 471901 WDNR LAT: 45.16N LONG: 89.12W ELEV: 1520 FT.
AREA DISPATCHER: DAVE CHRISTENSON (WDNR-WOODRUFF) (715) 358-9216
SOIL TYPE: SILT LOAM AND PEAT

KESHENA 472002 BIA/WDNR/MENOMINEE TRIBAL ENTERPRISES LAT: 44.89N LONG: 88.66W
AREA DISPATCHER: DEB JOHNSON (WDNR-WAUPACA) (715) 258-4959 ELEV: 870 FT.
SOIL TYPE: SAND LOAM

MOSINEE 472602 WDNR LAT: 44.77N LONG: 89.67W ELEV: 1230 FT.
AREA DISPATCHER: LLOYD DETTWILER (WDNR-WIS RAPIDS) (715) 421-7841
SOIL TYPE: SILT LOAM/SAND LOAM NEARBY

ROME 473501 WDNR LAT: 44.26N LONG: 89.81W ELEV: 1025 FT.
AREA DISPATCHER: LLOYD DETTWILER (WDNR-WIS RAPIDS) (715) 421-7841
SOIL TYPE: SAND

WAUTOMA 474201 WDNR LAT: 44.06N LONG: 89.30W ELEV: 982 FT.
AREA DISPATCHER: DEB JOHNSON (WDNR-WAUPACA) (715) 258-4959
SOIL TYPE: SAND

NWS SULLIVAN/MILWAUKEE CWA

DODGEVILLE 476001 WDNR LAT: 43.02N LONG: 90.14W ELEV: 1260 FT.

AREA DISPATCHER: VICKI HUGILL (WDNR DODGEVILLE) (608) 935-1929

SOIL TYPE: FORESTED AND PRAIRIE SILTY SOILS.

PARDEEVILLE 475701 WDNR LAT: 43.54N LONG: 89.30W ELEV: 820 FT.

AREA DISPATCHER: VICKI HUGILL (WDNR DODGEVILLE) (608) 935-1929

SOIL TYPE: PRAIRIE WITH SILTY SOILS. SOME MARSH LAND NEARBY, ISOLATED SANDY REGIONS.

HORICON 475601 U.S. FISH & WILDLIFE LAT: 43.44N LONG: 88.64W ELEV: 850 FT.

REFUGE MANAGER: PATTI MEYERS (920) 387-2658 EXT. 11

FIRE TECHNICIAN: JON KRAPFL (920) 387-2658 EXT. 23

SOIL TYPE: FORESTED AND SILTY SOILS. EXTENSIVE MARSH LAND IN AREA.

NWS LA CROSSE CWA

DIAMOND LAKE 471703 WDNR LAT: 45.10N LONG: 90.69W ELEV: 1317 FT.

AREA DISPATCHER: JOHN KELTO (WDNR-PARK FALLS) (715) 762-4684 EXT. 119

SOIL TYPE: SILTY TO LOAMY

BLACK RIVER FALLS 473901 WDNR LAT: 44.30N LONG: 90.83W ELEV: 838 FT.

AREA DISPATCHER: PATRICK GLASSPOOLE (WDNR-BLACK RIVER FALLS) (715) 284-1470 EXT 1412

SOIL TYPE: GENERALLY FORESTED SOILS OVER SANDSTONES.

NECEDAH 474301 WDNR AND US FISH & WILDLIFE LAT: 44.02N LONG: 90.08W ELEV: 920 FT.

AREA DISPATCHER: LLOYD DETTWILER (WDNR-WISCONSIN RAPIDS) (715) 421-7841

PRESCRIBED FIRE SPECIALIST: MICHAEL BELSKY (USFWS-NECEDAH) (608) 565-4410

SOIL TYPE: WETLAND/MARCH SOILS IN BOTTOM LANDS, OTHERWISE SANDY.

NWS CHANHASSEN/MINNEAPOLIS CWA

AUGUSTA 472801 WDNR LAT: 44.43N LONG: 91.04W ELEV: 1000 FT.

CONTACT: WAYNE NORRIS (WDNR-AUGUSTA) (715) 286-4340

SOIL TYPE: FOREST OVER SANDSTONE.

LADYSMITH 471601 WDNR LAT: 45.43N LONG: 91.11W ELEV: 1147 FT.

CONTACT: DAN SCHUMACHER (WDNR-LADYSMITH) (715) 532-3911

SOIL TYPE: SILTY TO LOAMY

NWS DULUTH CWA

HAYWARD 470803 WDNR LAT: 46.03N LONG: 91.45W ELEV: 1215 FT.
AREA DISPATCHER: JOHN KELTO (WDNR-PARK FALLS) (715) 762-3207 EXT. 119

PARK FALLS 470901 WDNR LAT: 45.90N LONG: 90.40W ELEV: 1491 FT.

WASHBURN 470207 WDNR LAT: 46.57N LONG: 91.25W ELEV: 1260 FT.
AREA DISPATCHER: BETH BARTOL (WDNR-BRULE) (715) 372-8539 EXT. 104

APOSTLE ISLANDS 470303 NPS LAT: 46.92N LONG: 90.75W ELEV: 651 FT.
FMO: KURT FOGELBERG (218) 283-9107 EXT. 6155 DISPATCH: (218) 283-9821

CLAM LAKE 470304 USFS LAT: 46.20N LONG: 90.97W ELEV: 1500 FT.
AREA DISPATCHER: STEVE RADAJ (USFS-WOODRUFF) (715) 358-6863

APPENDIX F

PRECIPITATION AND SKY TERMINOLOGY AND NOAA WEATHER RADIO

PROBABILITY OF PRECIPITATION TERMS (POP)

Terminology	POP
NONE OR SLIGHT CHANCE	10%
SLIGHT CHANCE	20%
CHANCE	30 TO 50%
LIKELY	60 TO 70%
NO MODIFIER	80 TO 100%

SHOWER AND THUNDERSTORM TERMINOLOGY

(assumes 100% probability that showers and thunderstorms will occur)

	POP
ISOLATED OR NONE	10%
ISOLATED OR WIDELY SCATTERED	20%
SCATTERED	30-50%
NUMEROUS	60-70%
NO MODIFIER	80-100%

CLOUD COVER will be subject to some variability in amount or location.

SUNNY/CLEAR...no clouds. 0/8 of opaque clouds.

MOSTLY SUNNY/MOSTLY CLEAR...the prevailing condition is sunny or clear but some clouds may be present either over a portion of the area or for a short period of time over the entire area. 1/8 to 2/8 of opaque clouds.

PARTLY CLOUDY/PARTLY SUNNY...3/8 to 5/8 of the sky will be covered by opaque clouds.

MOSTLY CLOUDY OR CONSIDERABLE CLOUDINESS...6/8 to 7/8 of the sky will be covered by opaque clouds.

CLOUDY...the sky is completely covered with clouds (8/8).

NOAA WEATHER RADIO
